+author:konaka +author:y

Nothing Found

Your search for +author:konaka +author:y did not return any results.

You may want to try an Advanced Search for additional options.

Please review the Quick Tips below or for more information see the Search Tips.

Quick Tips

• Enter your search terms in <u>lower case</u> with a space between the terms.

sales offices

You can also enter a full question or concept in plain language.

Where are the sales offices?

• Capitalize proper nouns to search for specific people, places, or products.

John Colter, Netscape Navigator

• Enclose a phrase in double quotes to search for that exact phrase.

"museum of natural history" "museum of modern art"

• Narrow your searches by using a + if a search term must appear on a page.

museum +art

• Exclude pages by using a - if a search term must not appear on a page.

museum -Paris

Combine these techniques to create a specific search query. The better your description of the information you want, the more relevant your results will be.

museum +"natural history" dinosaur -Chicago

SIGGRAPH 2005 emerging technologies projects: Ton2: a VR application with novel

interaction method using displacement data

Hiroshi Yabu, Yousuke Kamada, Masafumi Takahashi, Yukihiko Kawarazuka, Kazunori Miyata July 2005 ACM SIGGRAPH 2005 Emerging technologies SIGGRAPH '05

Publisher: ACM Press

Full text available: pdf(111.98 KB) Additional Information: full citation, abstract

window

This project introduces a novel interaction method using displacement data, as a matchup style VR application named "Ton2" in the theme of Paper-Craft Sumo. This VR system captures the waving motion data, and from those data, the participants play the Japanese traditional game, Paper-Craft Sumo in a typical way.

Keywords: VR, displacement data, interactive device, paper-craft sumo

A dimensionality reduction approach to modeling protein flexibility

Miguel L. Teodoro, George N. Phillips, Lydia E. Kavraki April 2002 Proceedings of the sixth annual international conference on Computational biology RECOMB '02

Publisher: ACM Press

Full text available: Total pdf(2.03 MB)

Additional Information: full citation, abstract, references, index terms

Proteins are involved either directly or indirectly in all biological processes in living organisms. It is now widely accepted that conformational changes of proteins can critically affect their ability to bind other molecules and that any progress in modeling protein motion and flexibility will contribute to the understanding of key biological functions. However, modeling protein flexibility has proven a very difficult task. Experimental laboratory methods such as X-ray crystallography produce ...

A Hardware-Friendly Wavelet Entropy Codec for Scalable Video Hendrik Eeckhaut, Harald Devos, Benjamin Schrauwen, Mark Christiaens, Dirk Stroobandt March 2005 Proceedings of the conference on Design, Automation and Test in Europe - Volume 3 DATE '05

Publisher: IEEE Computer Society

Full text available: pdf(329.69 KB) Additional Information: full citation, abstract, index terms

In the RESUME project we explore the use of reconfigurable hardware for the design of portable multimedia systems by developing a scalable wavelet-based video codec. A scalable video codec provides the ability to produce a smaller video stream with reduced frame rate, resolution or image quality starting from the original encoded video stream with almost no additional computation. This is important for portable devices that have different Quality of Service (QoS) requirements and power restricti ...

Trading off space for passes in graph streaming problems

Camil Demetrescu, Irene Finocchi, Andrea Ribichini

January 2006 Proceedings of the seventeenth annual ACM-SIAM symposium on Discrete algorithm SODA '06

Publisher: ACM Press

Full text available: pdf(219.16 KB) Additional Information: full citation, abstract, references

Data stream processing has recently received increasing attention as a computational paradigm for dealing with massive data sets. While major progress has been achieved for several fundamental data sketching and statistics problems, there are many problems that seem to be hard in a streaming setting, including most classical graph problems. Relevant examples are graph connectivity and shortest paths, for which linear lower bounds on the "space X passes" product are known. Some recent papers have ...

4 Algorithms: Significant facet retrieval for real-time 3D sound rendering in complex

virtual environments

Chris Joslin, Nadia Magnenat-Thalmann

October 2003 Proceedings of the ACM symposium on Virtual reality software and technology VRST '03

Publisher: ACM Press

Full text available: pdf(367.63 KB) Additional Information: full citation, abstract, references, index terms

Sound rendering requires that many different aspects are considered simultaneously, especially when rendering a real-time virtual environment. In 3D sound rendering, much the same as for graphics, one of the major influencing factors is the number of reflective polygons in a scene and due to the increase in the ability of most common graphics cards this number can now be very high, especially when scene designers produce an optimum scene using other optimizing tools such as Polygon Cruncher or R ...

Keywords: bounding-box, scene segmentation, sound rendering, virtual environments
